Product Sheet 1

PURUS DRAINAGE PRODUCTS

PURUS FLOOR GULLIES

This Agrément Certificate Product Sheet⁽¹⁾ relates to Purus Floor Gullies, a range of plastic, stainless steel and epoxy-coated cast iron gullies for use inside buildings to receive wastewater from floors in wet rooms and walk-in showers.

(1) Hereinafter referred to as 'Certificate'.

CERTIFICATION INCLUDES:

- factors relating to compliance with Building Regulations where applicable
- factors relating to additional non-regulatory information where applicable
- independently verified technical specification
- assessment criteria and technical investigations
- design considerations
- installation guidance
- regular surveillance of production
- formal three-yearly review.

KEY FACTORS ASSESSED

Mechanical resistance and stability — the products will have adequate strength to resist the loads experienced under normal service conditions (see section 6).

Hygiene, health and the environment — the products will allow disposal of wastewater without clogging (see section 7). Safety in use — the products are safe in use (see section 8).

Durability — the products will have adequate durability (see section 10).

The BBA has awarded this Certificate to the company named above for the products described herein. These products have been assessed by the BBA as being fit for their intended use provided they are installed, used and maintained as set out in this Certificate.

On behalf of the British Board of Agrément

Date of Second issue: 19 February 2014

Brian Chamberlain

B Chambelain

Head of Approvals - Engineering

Claire Curtis-Thomas

Chief Executive

The BBA is a UKAS accredited certification body — Number 113. The schedule of the current scope of accreditation for product certification is available in pdf format via the UKAS link on the BBA website at www.bbacerts.co.uk

Readers are advised to check the validity and latest issue number of this Agrément Certificate by either referring to the BBA website or contacting the BBA direct.

Regulations

In the opinion of the BBA, Purus Floor Gullies, if installed, used and maintained in accordance with this Certificate, will meet or contribute to meeting the relevant requirements of the following Building Regulations (the presence of a UK map indicates that the subject is related to the Building Regulations in the region or regions of the UK depicted):

The Building Regulations 2010 (England and Wales) (as amended)

Requirement: H1(1) Foul water drainage

Comment: The products will contribute to meeting the regulatory requirements. See sections 7.1 to 7.5 of

this Certificate.

Regulation 7 Materials and workmanship

Comment: The products are acceptable. See sections 10.1 to 10.3 and the *Installation* part of this Certificate.

The Building (Scotland) Regulations 2004 (as amended)

Regulation: 8(1)(2) Fitness and durability of materials and workmanship

Comment: The products satisfy the requirements of this Regulation. See sections 9.1 to 9.4, 10.1 to 10.3 and the

Installation part of this Certificate.

Regulation: 9 Building standards applicable to construction

Standard: 3.7(b) Wastewater drainage

Comment: The products will contribute to meeting the requirements of this Standard, with reference to clause 3.7.1(1).

See sections 7.1 to 7.5 of this Certificate.

(1) Technical Handbook (Domestic).

The Building Regulations (Northern Ireland) 2012

Regulation: 23 Fitness of materials and workmanship

Comment: The products are acceptable. See sections 10.1 to 10.3 and the *Installation* part of this Certificate.

Regulation: 81 Underground foul drainage

Comment: The products will contribute to meeting the stated requirements. See sections 7.1 to 7.5 of this Certificate.

Construction (Design and Management) Regulations 2007

Construction (Design and Management) Regulations (Northern Ireland) 2007

Information in this Certificate may assist the client, CDM co-ordinator, designer and contractors to address their obligations under these Regulations.

See section: 8 Safety in use (8.1 and 8.2) of this Certificate.

Additional Information

NHBC Standards 2014

NHBC accepts the use of Purus Floor Gullies, provided it is installed, used and maintained in accordance with this Certificate, in relation to NHBC Standards, Chapter 8.1 Soil and waste systems, D16 and D17

Technical Specification

1 Description

1.1 The Purus Floor Gullies are available in polypropylene, stainless steel and epoxy-coated cast iron, in various types and sizes as detailed in Table 1.

Product code Description	Description	Material	Outlet	Capacity		
			diameter (mm)	(·s ⁻¹)		
HEAVY			()	(/		
710 28 36	HEAVY 75 R	stainless steel	75	3.0		220

2 Manufacture

- 2.1 Continuous quality control is exercised during manufacture including regular checks on appearance, dimensions, marking and loading classification. An inspection body on behalf of SITAC is responsible for ensuring that product quality is maintained.
- 2.2 As part of the assessment and ongoing surveillance of product quality, the BBA has:
- agreed with the manufacturer the quality control procedures and product testing to be undertaken
- assessed and agreed the quality control operated over batches of incoming materials

- monitored the production process and verified that it is in accordance with the documented process
- evaluated the process for management of nonconformities
- checked that equipment has been properly tested and calibrated
- undertaken to carry out the above measures on a regular basis through a surveillance process, to verify that the specifications and quality control operated by the manufacturer are being maintained.
- 2.3 The Purus Floor Gullies are manufactured in Sweden by the Certificate holder and marketed in the UK by Purus Ltd, Suite 6, Arena Park, Tarn Lane, Scarcroft, Leeds, LS17 9BF.
- 2.4 The management systems of Purus AB have been assessed and registered as meeting the requirements of EN ISO 9001: 2008 by SP Certification accredited by the Swedish Board for Accreditation and Conformity Assessment (Certificate 1590).

3 Delivery and site handling

- 3.1 The gullies and their accessories are marked with the manufacturer's name, product type, code, date of manufacture and approval number. The gullies are supplied in cardboard boxes.
- 3.2 The products are of robust construction but rough handling (eg dropping on hard floor) may cause distortion of such features as seals, grating, extension rings. Damaged items should be discarded.

Assessment and Technical Investigations

The following is a summary of the assessment and technical investigations carried out on Purus Floor Gullies.

Design Considerations

4 General

- 4.1 Purus Floor Gullies are satisfactory for use as receptacles located inside buildings for disposing of wastewater from floors in wet rooms and walk-in showers.
- 4.2 The products are for use inside domestic, commercial and public buildings with gravity drainage systems installed in accordance with BS EN 12056-1: 2000, BS EN 12056-2: 2000, BS EN 12056-3: 2000 and BS EN 12056-5: 2000 for the conveyance of surface water and domestic sewage as is permitted to be discharged into public sewers by the Water Industry Act 1991, and surface water and sewage as is permitted and defined by the Sewerage (Scotland) Act 1968 and the Water and Sewerage Services (Northern Ireland) Order 1973.
- 4.3 It is important for designers, planners, contractors and/or installers to ensure that the installation of the gullies is in accordance with the Certificate holder's instructions and the information given in this Certificate.

5 Practicability of installation

The gullies are designed to be installed by a competent general builder, or a contractor, experienced with this type of product.

6 Mechanical resistance and stability

- 6.1 The gullies will have adequate resistance to the loadings likely to be experienced under normal service conditions in the areas of use as defined in this Certificate.
- 6.2 The gratings, extension rings and clamping rings will have adequate strength and stability.
- 6.3 The products may be regarded as having a Class K3 rating in accordance with BS EN 1253-1: 2003.

7 Hygiene, health and the environment

- 7.1 The floor gullies have adequate flow characteristics and will allow disposal of wastewater without clogging.
 - 7.2 The products will provide water seal depths in excess of 50 mm.
- 7.3 Trapped gullies and gully bodies have adequate odour protection and watertightness.
- 7.4 Products for use with sheet floor covering will have adequate watertightness.
- 7.5 If an extension ring is used, the joint between the ring and the gully body will provide a watertight seal.
- 7.6 In a fire, gullies made of polypropylene will burn to form carbon dioxide and water.

8 Safety in use

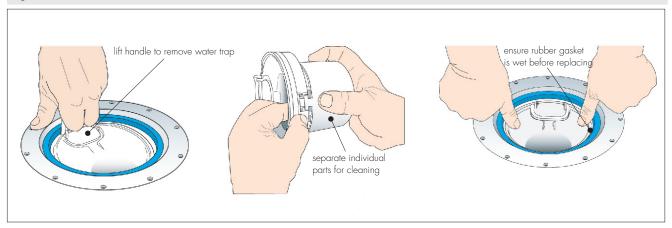

- 8.1 The products are free from sharp edges that can impair performance or cause injury to persons.
- 8.2 The gratings have apertures suitable for adequate performance and safety.

9 Maintenance

- 9.1 Sections of the floor gullies can be removed easily for cleaning or replacement.
- 39.2 With traps removed, the pipework can be rodded using either cane or polypropylene rods with a cleaning coil head.
- 9.3 The removable traps are cleaned using a soft brush (see Figure 1).

Figure 1 Maintenance

9.4 Adequate access for cleaning is provided on gullies so equipped. Trapped gullies which cannot be cleaned through a cleaning port or by removing the trap will have satisfactory performance.

10 Durability

- 10.1 When used within the conditions and recommendations given in this Certificate, the products will have adequate durability for disposing of wastewater from floors in wet rooms and walk-in showers.
- 10.2 The products will resist all thermal cycling conditions likely to occur in effluents from the areas of use defined in this Certificate. In particular, gullies for use with sheet floor covering can adequately resist such conditions.
- 10.3 The products are resistant to corrosion and will be unaffected by the types and quantities of chemicals likely to be found in wastewater from wet floors or effluents from domestic appliances.

Installation

11 General

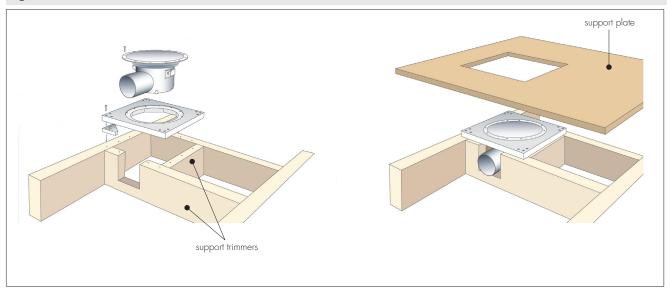

- 11.1 Installation of Purus Floor Gullies must be carried out in accordance with the Certificate holder's instructions and BS EN 12056-1: 2000, BS EN 12056-2: 2000 and BS EN 12056-3: 2000 and BS EN 12056-5: 2000.
- 11.2 Floors fitted with Purus Floor Gullies must be designed to allow the water to flow freely to the gratings and incorporate an effective damp-proof membrane in accordance with CP 102 : 1973, BS 8102 : 2009 and BS 8215 : 1991.
- 11.3 These products are designed to be installed by a competent general builder, or a contractor, experienced with these type of products.
- 11.4 The products can be installed in either timber or concrete floors using purpose-made accessories.

12 Procedure

Timber floors

12.1 Support trimmers are fixed to the main floor joists to suit gully dimensions (see Figure 2).

Figure 2 Installation in timber floor

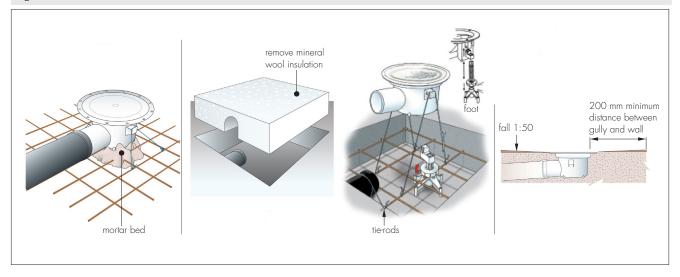

- 12.2 A purpose made support plate is fixed to the trimmers/joists with galvanized or stainless steel screws.
- 12.3 The gully body is positioned under the support plate and, after adjustment, secured to it using the screws provided.
- 12.4 Floor boards are cut to suit the support plate up-stand and fixed to the trimmers/joists, using screws, as normal.

Concrete floors

- 12.5 The gully is placed on a bed of mortar and its level/position adjusted as necessary.
- 12.6 To help keep it in place during concrete pour, the gully is tied to the reinforcement using the lugs provided on its body (see Figure 3).

Figure 3 Installation in concrete floors

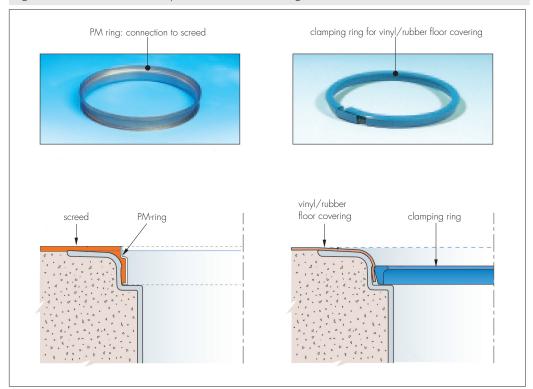

- 12.7 If the outlet pipe is installed first, a recess in the floor slab is made. The gully is then connected to the pipe end and concrete poured in the recess as normal (see Figure 3).
- 12.8 To facilitate level adjustment, a specially designed adjustable foot can be used (see Figure 3).

Vinyl/rubber floor coverings

12.9 Special clamping rings allow the floor covering to be attached around the gully (see Figure 4).

Figure 4 Installation with vinyl/rubber floor coverings

Technical Investigations

13 Investigations

13.1 Based on the Swedish Technical Approvals and supporting data, and in accordance with the requirements of BS EN 1253-1: 2003 and BS EN 1253-2: 2003 and BS EN 274-1: 2002, the products were assessed for:

- mechanical strength
- depth of water seal
- resistance of water seal to pressure
- blockage prevention
- position of side inlets
- odour and watertightness
- flow characteristics
- safety in use
- practicability of installation
- ease of maintenance
- resistance to thermal actions
- resistance to corrosion and chemicals.

13.2 The quality control procedures were examined and confirmation of the continuing surveillance by an inspection body, on behalf of SITAC, was obtained.

13.3 The manufacturer's literature was examined for any inconsistencies and general content.

Conditions of Certification

14 Conditions

14.1 This Certificate:

- relates only to the product/system that is named and described on the front page
- is issued only to the company, firm, organisation or person named on the front page no other company, firm, organisation or person may hold or claim that this Certificate has been issued to them
- is valid only within the UK
- has to be read, considered and used as a whole document it may be misleading and will be incomplete to be selective
- is copyright of the BBA
- is subject to English Law.
- 14.2 Publications, documents, specifications, legislation, regulations, standards and the like referenced in this Certificate are those that were current and/or deemed relevant by the BBA at the date of issue or reissue of this Certificate.
- 14.3 This Certificate will remain valid for an unlimited period provided that the product/system and its manufacture and/or fabrication, including all related and relevant parts and processes thereof:
- are maintained at or above the levels which have been assessed and found to be satisfactory by the BBA
- continue to be checked as and when deemed appropriate by the BBA under arrangements that it will determine
- are reviewed by the BBA as and when it considers appropriate.
- 14.4 The BBA has used due skill, care and diligence in preparing this Certificate, but no warranty is provided.
- 14.5 In issuing this Certificate, the BBA is not responsible and is excluded from any liability to any company, firm, organisation or person, for any matters arising directly or indirectly from:
- the presence or absence of any patent, intellectual property or similar rights subsisting in the product/system or any other product/system
- the right of the Certificate holder to manufacture, supply, install, maintain or market the product/system
- actual installations of the product/system, including their nature, design, methods, performance, workmanship and maintenance
- any works and constructions in which the product/system is installed, including their nature, design, methods, performance, workmanship and maintenance
- any loss or damage, including personal injury, howsoever caused by the product/system, including its manufacture, supply, installation, use, maintenance and removal
- any claims by the manufacturer relating to CE marking.
- 14.6 Any information relating to the manufacture, supply, installation, use, maintenance and removal of this product/system which is contained or referred to in this Certificate is the minimum required to be met when the product/system is manufactured, supplied, installed, used, maintained and removed. It does not purport in any way to restate the requirements of the Health and Safety at Work etc. Act 1974, or of any other statutory, common law or other duty which may exist at the date of issue or reissue of this Certificate; nor is conformity with such information to be taken as satisfying the requirements of the 1974 Act or of any statutory, common law or other duty of care.
