

Electrical Connections

The electrical installation must be in accordance with the current BS7671 (I.E.T. wiring regulations) and “Part P” of the Building Regulations and/or local regulations. The unit is designed for a single phase 50Hz AC electrical supply.

Please check the rating plate on the unit to see what details apply to your unit. A means for disconnection of all poles must be incorporated in the fixed wiring in accordance with the wiring regulations. We recommend ceiling pull switches.

The cable size required is determined by the kW rating of the shower and the distance between the shower and the consumer unit and the installation conditions.
