Description

The AKW Captive curtain system or Shower Curtain Clip provides the user with the confidence of the shower curtain staying in place.

By adding a seam to one edge of the curtain it can be locked into the Captive Strip (which has to be fixed to the wall) keeping all over-sprayed water inside the showering area.

This can be especially advantageous in high use situations where the showering facilities are used a number of times per day.

When drawing the shower curtain the remaining end tends to follow in the same direction as the user is pulling, leaving a potential gap for over sprayed water to leak through.

If there is a window or vent that encroaches into the shower area, the Captive curtain system can be used to secure and overcome the problem.

This system can be used with any AKW shower curtain - please order your curtain separately.

Features and benefits:

- Prevents water leaks from the open edges of the shower curtain
- 2000mm length
- Curtain can be removed to allow for washing
- Simple hinge clip design, simply clips to the edge of the curtain to lock and unclips to release
- Quick and easy to use hinge design
- Curtain can be easily released by hand, open hinged clasp to release
- White PVC extrusion
- Shower curtain can be removed to allow for washing
- Compatible with half height shower doors
- Installation: Self-Adhesive Fitting Strip or screw fixing points if required

Please note: Shower curtain and curtain rail not included - please order separately
